

AccountIQ

AI-powered ERP query & GST compliance for Indian SMEs

Live at acctqai.com

GSTR-2B ITC Tracking

Made for Indian Finance Teams

Product Overview · June 2026 · Confidential

What is AccountIQ?

AccountIQ connects to a company's ERP data — Tally exports, Zoho Books, or raw General Ledger files — and lets finance teams query their books in plain English, run GST and TDS compliance checks, and receive daily automated alerts. No SQL knowledge needed. No waiting for a data analyst or CA.

Core insight: Indian SMEs lose real money every month because vendors don't file their GSTR-1 on time — blocking Input Tax Credit without warning. AccountIQ is the only product that proactively tracks this at the invoice level, before the government reversal notice arrives.

Who It's For

SME Finance Managers & CFOs

Companies with ₹5Cr–₹500Cr turnover who use Tally or Zoho Books

Accountants & CA Firms

Teams that manage monthly GST reconciliation for multiple clients

Manufacturing & Trading

High purchase volume businesses with many vendors — ITC tracking is critical

Anyone waiting for reports

Teams that currently wait days to get a simple "cash balance" answer

Complete User Journey

1 Sign Up & Onboard

User signs up at **acctqai.com**. After email verification, a short wizard collects company name, ERP type (Tally / Zoho Books / File Upload), and role (CFO / Finance Manager / Accountant). Takes under 2 minutes.

2 Connect Data — Upload Files

User goes to **Connections** → **New** and uploads an Excel or CSV export from their ERP. The system auto-detects the document type by scoring column headers:

- **GL** — transaction_date, voucher_type, debit/credit amounts
- **GSTR-1** — gstin_of_recipient, outward supply columns
- **GSTR-2B** — supplier_gstin, itc_eligibility columns
- **Form 26Q** — deductee_pan, tds_amount columns
- GSTR-3B, ITR, OTHER

User confirms the detected type and data period. File is parsed into a structured database table. Data is retained for 90 days (users re-upload monthly, matching their filing cycle).

3 Query Studio — Ask AI

User opens a GL connection and clicks **Ask AI**. They type questions in English, Hindi, or Hinglish:

- *"May mein kitna GST pay karna hai?"*
- *"Show overdue debtors above 60 days"*
- *"Top 5 vendors by spend this quarter"*
- *"Cash and bank balance as of today"*

How the Query Pipeline Works

Every question passes through 4 layers in order. Each layer is cheaper and faster than the next. A query stops at the first layer that can answer it.

Layer 1 – Template Engine

50+ hand-written SQL templates · ₹0 cost · <50ms · handles ~70% of queries

Matched by keyword/regex patterns on the question. Returns SQL instantly with 100% accuracy. The template library encodes Indian SME finance knowledge – Tally voucher types, GST naming, Hindi/Hinglish patterns.

↓ no match

Layer 2 – RAG (Past Q→SQL pairs)

~₹0.001/query · 100-200ms · handles ~20% of queries

Retrieves the 3 most similar past questions, injects them as few-shot examples into the LLM prompt. Every query run by any user improves accuracy for all future similar queries.

↓ LLM called with context

Layer 3 – LLM (Last Resort)

Groq Llama 3.3 70B (free) for simple · Claude Haiku for complex · handles <10% over time

Result is stored back to RAG so the same question never hits the LLM twice. Cost per query decreases as usage grows.

↓ SQL error

Layer 4 – Execution Feedback Loop

SQL error sent back to LLM → retry once

Catches column name mismatches and syntax errors automatically.

Privacy guarantee: Before any LLM sees data, a tokeniser masks all PII. Vendor names become VENDOR_T001, amounts become AMT_T002. Real customer data never leaves the server in LLM prompts.

4 Compliance Reconciliation

User goes to a connection → **Reconcile tab**. Selects a second compliance document to compare against. The system runs automated matching and surfaces every gap.

Three Reconciliation Types

GL ↔ Form 26Q (TDS Reconciliation)

Checks payment entries in the GL against TDS deducted in the 26Q return. Finds: payments above ₹30K where TDS wasn't deducted, wrong rates applied, missing deductee PANs.

GL ↔ GSTR-1 (Outward Supply Reconciliation)

Checks sales invoices in the GL against what was reported in the GSTR-1 filing. Finds: invoices filed but not in GL, amount mismatches, party name discrepancies.

GL ↔ GSTR-2B (Vendor ITC Reconciliation) — Our Moat

Checks purchase invoices in the GL against the government's GSTR-2B inward supply statement. This is what no other tool does proactively.

Gap Code	Severity	What it means	Business impact
G2BGL-002	Critical	GL has invoice, GSTR-2B doesn't	Vendor hasn't filed GSTR-1 — ITC will be blocked on reversal
G2BGL-003	Review	GSTR-2B has invoice, GL doesn't	ITC is available but was never booked — free money left unclaimed
G2BGL-004	Review	Matched, but ITC marked ineligible	Credit blocked — shown with exact reason from GSTN
G2BGL-005	Review	Vendor name mismatch on same invoice	Possible wrong-vendor booking in GL
G2BGL-001	Info	Overall purchase vs taxable total variance	Summary-level mismatch flag

5 Vendor ITC Scorecard

After reconciliation runs, per-vendor compliance scores are persisted permanently (surviving the 90-day file expiry). User goes to **Vendor ITC Scorecard** on the connection page to see:

- **Red vendors** — >30% of invoices at risk across trailing periods
- **Amber vendors** — 10–30% at risk, watching
- **Green vendors** — ≤10% risk, consistently filing
- ₹ ITC at risk per vendor for the current period
- Period-by-period history table per vendor — expandable

This is the **first time Indian SMEs can see which vendors are a compliance risk before the government reversal notice arrives.**

6 Daily Pulse — Automated Alerts

User enables Daily Pulse on a connection. Every morning at 8 AM, the system automatically:

- Computes a financial snapshot (account balances, movement totals)
- Checks for TDS gaps on recent payment entries
- Checks for vendor GST filing risk from persisted compliance records
- Alerts on upcoming compliance deadlines (GSTR-1 due, advance tax dates)
- Emails the admin a severity-coded digest
- Stores the digest in-app for review anytime

Cadence: Daily or Weekly. Individual alert categories can be snoozed.

Supporting Features

Flags missing dates, inconsistent voucher types, duplicate entries, suspicious transactions

Period-over-period variance on account balances — automatic explanations

Account Mapping

Maps raw Tally/Zoho account names to a standard chart of accounts

Schema Inspector

Shows detected columns, canonical mappings, and data confidence scores

Period Close Assistant

Guided checklist for monthly close — marks tasks complete as checks pass

API Access

Programmatic API keys for integration with existing finance workflows (roadmap)

Why AccountIQ is Defensible

Problem	What existing tools do	What AccountIQ does
"What's my cash balance?"	Export to Excel, build pivot table	Ask in plain English, answer in <1 second
TDS compliance check	CA checks manually, once a quarter	Auto-flagged on every payment entry
GSTR-1 reconciliation	CA compares printouts manually	Automated gap list in seconds
GSTR-2B vendor ITC tracking	Nobody checks until reversal notice	Proactive alert before damage hits
Monthly financial reports	Wait for accountant (days)	Daily automated digest in email
Hindi/Hinglish queries	Not supported anywhere	Native support built into tokeniser

The 50+ template library encodes Indian SME finance knowledge (Tally voucher types, GST invoice naming conventions, Indian fiscal year logic) that cannot be replicated with a generic ChatGPT wrapper. The RAG system means the product gets smarter with every query — cost per query decreases as usage grows, while accuracy increases.

Pricing

Starter

₹999/month

- ✓ 1 connection
- ✓ Query Studio
- ✓ Basic reconciliation
- ✓ Daily Pulse alerts
- ✓ 90-day data retention

Pro

₹2,499/month

- ✓ 5 connections
- ✓ All reconciliation types
- ✓ GSTR-2B Vendor Scorecard
- ✓ Flux Analysis
- ✓ Priority support

Enterprise

₹5,999/month

- ✓ Unlimited connections
- ✓ API access
- ✓ Custom templates
- ✓ Dedicated onboarding
- ✓ SLA guarantee
